Purga Reserve QLD

Restrooms with CWT Collection Well System

A site at a bush nature reserve that was visited by school kids on day excursions. A two booth – male and female – facility with disabled access was required. No sewer or water services were available.

The solution was a Pureblue Countrystyle CS2, with two AS1428.1 (2001) disabled access compliant booths, melded with a 10 000L CWT Collection Well with a rainwater harvest and storage system to supply water for hand-washing sink. A pump-out management plan was included that catered for a high usage.
